

The famous Ivar's Acres of Clams flagship location recently completed a down-to-the-studs remodel of its 77-year old restaurant on Pier 54 in downtown Seattle. With the assistance of Fulton representative Mechanical Sales, Inc., three Endura condensing hydronic boilers were installed in the renovated facility; two EDR-750 and one EDR-1000. Installed for building heat, these units were selected because of their ability to integrate directly into a primary only flow installation. The Endura's rugged construction and easy accessibility for maintenance were also key benefits.
